

## Linked In!

### Objectives

**Connect devices using wired and wireless media.**

In this activity, you will map your network cabling or technology type ideas to a physical topology. Because this chapter focuses on the network access layer, you should be able to prepare a basic physical model. No logical (IP addressing) schemes are required for this activity.

### Physical Topology

### Background/Scenario

**Note:** This activity is best completed in groups of 2-3 students.

Your small business is moving to a new location! Your building is brand new and you must come up with a physical topology so that network port installation can begin.
